JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– gallium arsenide 169
Apparatus
– for melt growth
– – by floating zone under microgravity
– – – of gallium arsenide 350
– for surface tension
– – of silicon 52

Biological mineralization
– of chicken bone 443

Cadmium
– telluride 206
Carbon 79
Cellular growth
– of succinonitrile 296, 473
Computer simulation
– of dendritic growth 285
– of heat flow 350, 383
– of refractive index distribution of KTP 303
– of thermal strain by finite elements 337
Convection 383, 454
Copper
– indium selenide 404

Defects
– aggregates of point 377
– tetragonal distortions 147
Dendritic growth
– of ammonium bromide 285
– of succinonitrile 296
Device characterization
– electronic materials 17, 155, 191, 343, 361
– heterojunction 155, 163, 169, 191, 373
– lasers 410
– quantum wells 147, 186, 373
Diffusional control
– of solute segregation 467
– of zinc in indium phosphide 17

Electronic materials, see Device characterization
Epitaxy, see Thin film growth

Gallium
– aluminum arsenide 177
– antimonide 30
– arsenide 1, 11, 133, 169, 177, 333, 343, 350, 361, 487
– indium arsenide 23
– indium arsenide antimonide 39

Heat flow control, of 413
Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– antimonide 191
– arsenide antimonide 311
– gallium aluminum arsenide 186
– gallium arsenide 147
– phosphide 17, 59, 337
– thallium antimonide 320

Kinetics
– of growth 23, 39, 45, 59, 121, 140, 169, 177, 206, 227, 267, 311, 426, 454
– of interface control 23, 267
– of nucleation 252, 459

Lasers, see Device characterization
Lasers, crystals for
– lithium triborate 410
– ultraviolet nonlinear optics 307
Lysozyme 112, 121, 267

Melt growth technique
– by Czochralski method
– – of bismuth germanium oxide 413
– – of bismuth silicon oxide 413
– – of gadolinium molybdate 454
– – of silicon 377
– by e-beam floating zone melting
– – of nickel 480
– by floating zone method
– – of gallium arsenide 350
– – of mercury cadmium telluride 212
– – of silicon 377
– – of 2-adaman thyllamino-5-nitropyridine 279
– by kyropoulos method
– – of cesium lithium borate 307
– by melt textured
– – of YBCO 398

– by uniaxial solidification
– – of succinonitrile 473
– by magnetic field vertical gradient freeze method
– – of gallium arsenide 487
– theory of solute redistribution 467
Mercury
– cadmium telluride 212
– iodide 86
Microgravity, growth under
– of gallium arsenide 350
– of human estrogenic 17 beta-hydroxysteroid dehydrogenase 108
Morphological stability
– of aluminum fluorosilicate (topaz) 433
– of facets 267
– of indium antimonide 191
– of layered-wise growth 454
– of succinonitrile 269, 473

Nickel 480
Nucleation
– of adipic acid 459
– of biological substances 443
– of bismuth tri-iodide 221
– of paracetamol 252
Numbers
– Peclet 285

Phase diagram
– of cesium lithium borate 307
– of indium copper selenide 404
– of indium telluride antimonide 320
Precursor
– for alpha-cordierite 99
– for indium arsenide antimonide 311
– for zinc sulphide 45
Purification of materials
– of bismuth tri-iodide 221
– of mercuric iodide 86
– of 17 beta-hydroxysteroid dehydrogenase 108

Quantum wells, see Device characterization

Silicon 52, 377, 383
Solid growth technique
– by recrystallization
– – of strontium calcium copper oxide 393
Solution growth technique
– by flux method
– – of cesium lithium borate 307
– – of copper indium selenide 404
– – of KTP 303
– – of lithium triborate 410
– by low temperature method
– – of citric acid 261
– – of lysozyme 121, 267
– – theory of tetragonal crystallization of lysozyme 121
– by slow gel
– – of calcium tartrate 421
– by sol–gel
– – of alpha-cordierite 99
– – of ammonium bromide 285
– – of lysozyme 112
Superconductivity materials, high T_c
– film
– – of BSCCO 67
– – of YBCO 216, 398
Superlattices, multilayers
– of III–V compounds 133, 147
Surface energy, determination
– of silicon 52
Surface morphology
– of bismuth tri-iodide 221
– of gallium arsenide 133
– of indium arsenide antimonide 311
– of indium telluride antimonide 320
Surface structure
– of indium–indium phosphide heteroepitaxy 17

Thin film growth, epitaxy
– by hot wall
– – of fullerene C_{60} 79
– by liquid phase electroepitaxy
– – of YBCO 216
– by liquid phase epitaxy
– – of gallium arsenide 361
– – of indium gallium arsenide phosphide 368
– – of indium phosphide 337
– by metalorganic molecular beam epitaxy
– – of aluminum arsenide 11
– – of gallium arsenide 11
– – of gallium nitride 11
– by molecular beam epitaxy
– – of antimony 30
– – of dibenzo(b,t)phthalocyaninato-zinc(II) 245
– – of dysprosium 74
– – of gallium antimonide 30, 327
– – of gallium arsenide 1, 133
– – of indium antimonide 191
– – of indium gallium aluminum arsenide 186
– – of yttrium 74
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of bismuth strontium cuprate 67
– – – of 4′-dimethylamino-N-methyl-4-stilbazolium tosylate (DAST) 91
– – – of manganese antimonide 155
– – through evaporation and condensation
– – – of molybdenum trioxide 235
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 169, 177
– – – of aluminum nitride 140
– – – of cerium dioxide 227
– – – of gallium arsenide 169, 333, 343
– – – of gallium indium arsenide antimonide 39
– – – of gallium nitride 140
– – – of gallium phosphide 23

– – – of indium arsenide antimonide 311
– – – of indium gallium arsenide phosphide 368
– – – of indium gallium phosphide 23
– – – of indium phosphide 23, 337
– – – of indium thallium antimonide 320
– – – of yttria stabilized zirconia 426
– – – of zinc selenide 163
– – – of zinc sulphide 45
– – – of zinc magnesium telluride 373
– – – of zinc telluride 373

Vapor growth technique
– by evaporation and condensation
– – of bismuth tri-iodide 221
– – of indium phosphide 59
– – of mercuric iodide 86
– – theory of pressure dependence of selective growth 59
– by hot wall
– – of manganese antimonide 155

Zinc
– magnesium telluride 373
– selenide 163
– sulphide 45
– telluride 373
